TOPICAL CARE

LOTION

SOAP

A topical medication is a medication that is applied to a particular place on or in the body. Most often topical administration means application to body surfaces such as the Skin or Mucous membranes to treat ailments via a large range of classes including Creams, Foams, Gels, Lotions and Ointments. Many topical medications are epicutaneous, meaning that they are applied directly to the skin.

Our brands **Kshine** and **Ketsal**, come with a unique composition that helps to overcome diseases like Seborrheic Dermatitis, Dandruff, Psoriasis and Warts.

LOTION

SOLUTION

Topical therapies involve the application of a Topical agent on affected sites of Skin. Topical agents are compounds consisting of a main agent and a vehicle (base). The main agent acts on lesions, whereas the vehicle acts as a supplement to increase absorption of the agent.

Depending on the vehicle used, the same drug can be placed in Ointments, Creams, Lotions, Baths and soaks, Foams, Solutions, Powders, Gels.

There are hundreds of Skin conditions that affect Humans. The most common Skin conditions can have some symptoms that are similar, so it is important to understand the differences between them.

In some cases, the condition will not always be present but will flare up at certain times. For example Seborrheic Dermatitis, Eczema, Melanoma, Psoriasis, Vitiligo, Warts etc.
